National Center for Disability Education & Training

Collaborative Partner:

On June 7, 2006, 21 Tech-Success participants attended an 8 hour STEM activity planned by the Education Department of the Oklahoma City Zoo and conducted in their education center. Using economics, animal behavior, and science skills, participants worked in small groups on a Zoo Design exercise in which they designed buildings, zoo layout, and animal purchases for their twenty-first century Zoos. Afterwards, students learned about zoo careers in STEM-related occupations.
